

Library and Media Centre of the University of Guadalajara

瓜达拉哈拉大学图书馆和媒体中心

This building is a pioneer in the implementation of standardised norms for accessibility for people with disabilities; it has a set of ramps and aisles specially designed to make it 100% accessible. It will have a collection of 120,000 books, DVDs, and videos in a total surface of 5,346 square metres, making it the biggest public library in the western region of Mexico and the second one after the recently opened Central Library Jose Vasconcelos in Mexico.

这一项目是无障碍建筑领域的标准开拓者，它的走廊和坡道的设计完全达到了100%无障碍的标准。图书馆总面积为5,346平方米，共有120,000册藏书和DVD等影像资料，是墨西哥西部最大的公共图书馆，也是墨西哥第二大图书馆。

The programme was met within a very narrow margin, and the goal was of course to have first of all a very functional building. The building is organised into three different prisms, each built with different materials in order to make each volume's programme recognisable. The reading volume is built with red brick and is mainly opened to the north so the interior receives the best illumination for reading without any direct sunlight. The volume that contains the books is built in concrete and completely closed to the exterior, so this volume is read from outside as a closed, protected box. The media centre is allocated inside a metallic volume; this volume makes use of the latest technology in metal cladding and isolation.

项目计划以极少的预算建造一座功能齐全的建筑。大楼共分为三个部分，每一部分都采用了不同的材料，以增加各个部分的辨识度。阅读区采用了红砖结构，朝向北面开放，既可以获得最佳照明，又避免了阳光直射。藏书区采用了混凝土结构，从外面看，是一个全封闭的“盒子”。媒体中心采用了金属结构，运用了最先进的金属外墙和隔离技术。
