# Villa Paya–Paya, Seminyak, Bali

This villa is located in Seminyak, a bustling residential area in the heart of Bali, Indonesia. The site bordered on the north by a six-metre public road, and by a pangkung (dried, old river in Balinese) on the south. The client requested to have a holiday home for the small family of four, with a simple programme: large living and dining, large servant quarter, a master bedroom with huge bathroom and two smaller bedrooms.

The sloping site gives an advantage to the design. Aboday, as an architect, doesn't want to have an imposing building. The villa needs to respect human scale and main road as main way to the temple. This road is sometimes crowded during the Hindu celebration as a shortcut to the nearby temple, and anything taller than coconut trees will be an intrusion to their ritual. The two-level villa appears as a friendly single-storey building from the road, sunk in the rest of the room programme on its ground level. Instead of evoking the surrounding typical Balinese building of slooping coconut leaf roof, Aboday choose a simple concrete white box as the façade of the building. The traditional sloping roof is still used in the master bedroom pavilion with its wood structure, hidden behind the white box façade, as an element of surprise among the domination of white forms.

帕雅别墅

帕雅别墅位于巴厘岛上一片繁华的居民区——水明漾，北面是6米宽的公路，南面是一条干涸的河流。委托人一家共有四口人，需要一座简单的度假别墅：开阔的客厅和餐厅、宽敞的佣人房、一间带有浴室的主卧室和两间略小的卧室。

具有坡度的建筑场地为设计提供了便利。建筑师并不想设计一座过于壮观的建筑，别墅要具有人文尺度，也要尊重通往寺庙的道路。这条路在印度教庆典时会变得异常拥挤，而过高的建筑（高于椰子树）会为仪式带来困扰。由于斜坡的原因，这座两层高的别墅看起来就像只有一层一样，与周边的环境十分相称。别墅并没有采用巴厘岛经典的椰子叶屋顶造型，而是采用了简约的白色混凝土盒结构。传统的斜面屋顶将被运用在主卧室区，隐藏在白色盒结构里面，作为一个惊喜元素。

1. swimming pool
2. master bedroom
3. pool deck
4. store room
5. dining room
