

## 国家大剧院

The National Center for the Performing Arts of China

建成时间 Completion Year : 2007  
建设面积 Building Area : 219 400m<sup>2</sup>  
合作公司 Partner : ADPI

国家大剧院总体规划融合了水、绿色空间和人性化建筑三大主要元素。主体建筑是一幢由曲线构成的超大椭球壳体，通透的玻璃如同舞台拉开的幕布。当夜幕降临时，钛金属板上的蘑菇灯如同千万颗小星星，若隐若现，在绿树掩映中，有一种朦胧之美。

国家大剧院内设有歌剧厅、音乐厅、戏剧场及小剧场。四个观众厅根据不同的空间、预定的音质设计目标、追求的装饰风格，各自采用了独特的设计，使环境视觉效果与听觉效果得到了完美的融合。

The masterplan of the National Center for the Performing Arts of China integrates

the three major elements of an architecture: water, green space and humanization. The main building is a large ellipsoid shell designed with smooth curves, with the transparent glass like an opening curtain of a stage. When night falls, the lights on the titanium plate are like thousands of little stars, hidden or visible in the shadow of green trees, creating an overall image of a hazy beauty.

The complex includes an opera house, a concert hall, a theatre and a smaller theatre. The four auditoriums are designed uniquely according to different spaces, predetermined sound quality, and decorative style to integrate the environmental visual effects and auditory effects perfectly.
